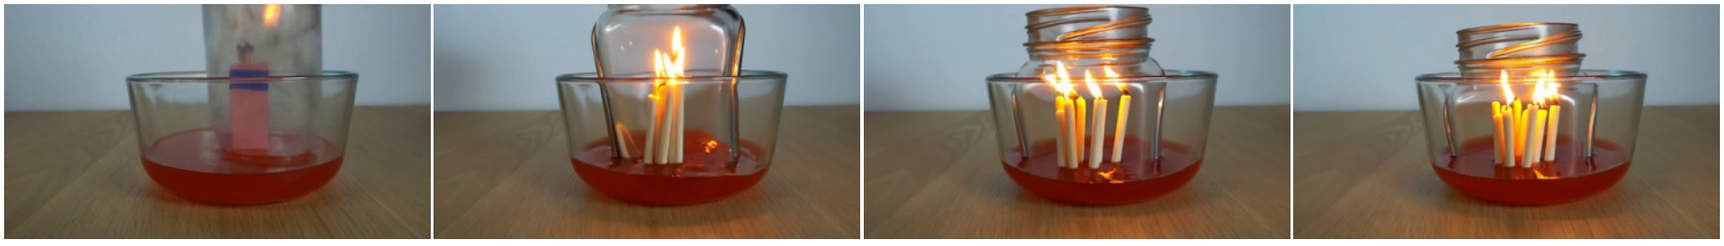
(a) models: ltx-2-19b-dev

prompt:
The rising ocean tide floods a sandy beach, surrounding several grounded boats. As the water deepens, it lifts the vessels off the wet sand, causing them to become buoyant and float. The boats bob gently on the surface of the incoming water while a person walks along the shoreline.

(b) models: cosmos-predict2.5-2b

prompt:
A pair of black leather boots is slowly lowered into a clear glass bowl filled with water. As the boots submerge, they displace the liquid, causing the water level to steadily rise until it reaches the top rim of the bowl.

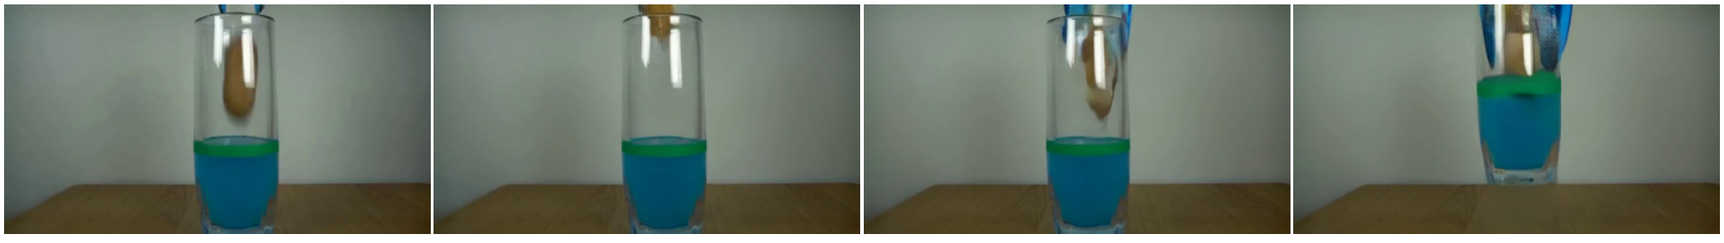


(c) models: cosmos-predict2.5-2b

prompt:
A bundle of lit matchsticks is placed in a bowl of red liquid. A glass jar gets lowered and covers the matchsticks. The burning matches consume oxygen, creating a vacuum that pulls the liquid into the jar. Static shot with no camera movement.

(d) models: wan2.2-ti2v-5b

prompt:
A red strawberry drops into a glass filled with foamy pink liquid. As the fruit submerges, it displaces the drink, forcing the liquid level to rise and the surface foam to splash outward.



(e) models: ltx-2-19b-dev

prompt:
A potato is held by a grabber tool and dropped into a tall glass containing blue liquid with a band of green tape marking a level on the glass. The potato displaces the liquid, causing the liquid level to rise above the tape mark. Static shot with no camera movement.
