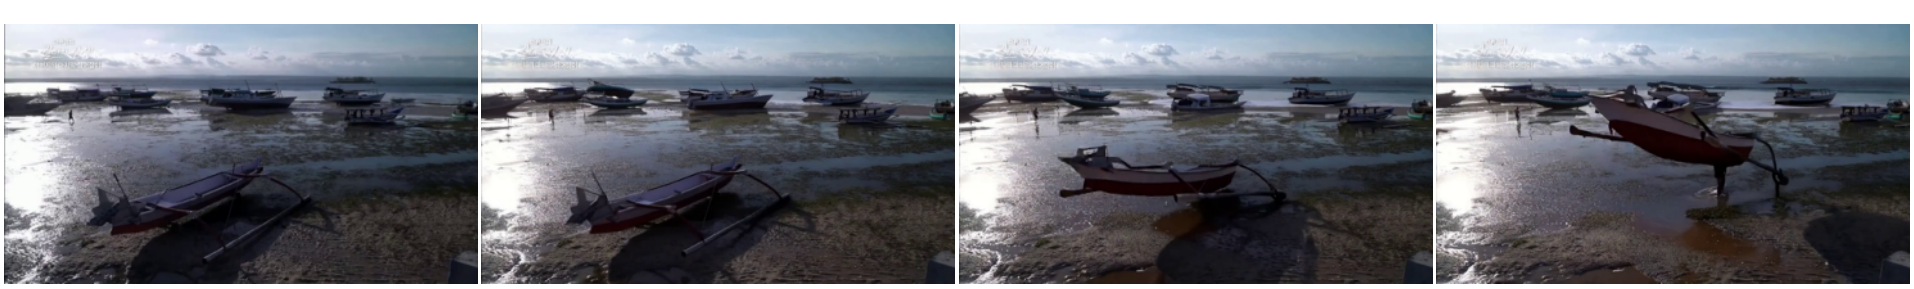
(a) models: wan2.2-ti2v-5b

prompt:
A chef in a modern kitchen tips a white bowl, pouring its contents in a steady stream that flows smoothly down into a pot on the stove. He then stirs the mixture with a spoon, causing the liquid to swirl and flow in continuous, circular currents.

(b) models: wan2.2-ti2v-5b

prompt:
A heavy car tire rolls over a green bottle on concrete, crushing it flat. The trapped liquid bursts from the broken bottle and rapidly flows outward, spreading across the ground in an expanding puddle.



(c) models: cosmos-predict2.5-2b

prompt:
The rising ocean tide floods a sandy beach, surrounding several grounded boats. As the water deepens, it lifts the vessels off the wet sand, causing them to become buoyant and float. The boats bob gently on the surface of the incoming water while a person walks along the shoreline.

(d) models: cosmos-predict2.5-14b

prompt:
A glass bottle tips, pouring a thick, golden liquid into a white mug resting on a wooden cutting board. The syrupy liquid flows continuously in a smooth, heavy stream, slowly pooling at the bottom of the mug.

(e) models: cosmos-predict2.5-2b

prompt:
A bundle of lit matchsticks is placed in a bowl of red liquid. A glass jar gets lowered and covers the matchsticks. The burning matches consume oxygen, creating a vacuum that pulls the liquid into the jar. Static shot with no camera movement.
